Less Wrinkles **More Lift**

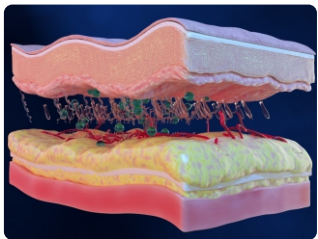

How Does FaceLift 3D Work?

EXTREME

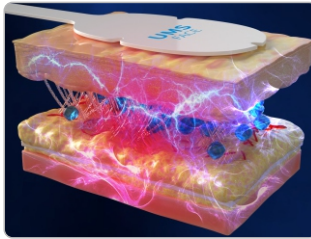

FaceLift 3D is a facial rejuvenation procedure that uses high-intensity facial electromagnetic stimulation (HIFES) and radiofrequency (RF) energy to lift and sculpt facial contours while reducing wrinkles.

It is the only non-invasive facial treatment that targets both the skin

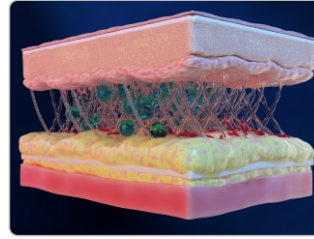

Before

The muscles and skin are in a relaxed state, with reduced volume and elasticity.

HIFES+Sync RF

The muscle density is increased, with

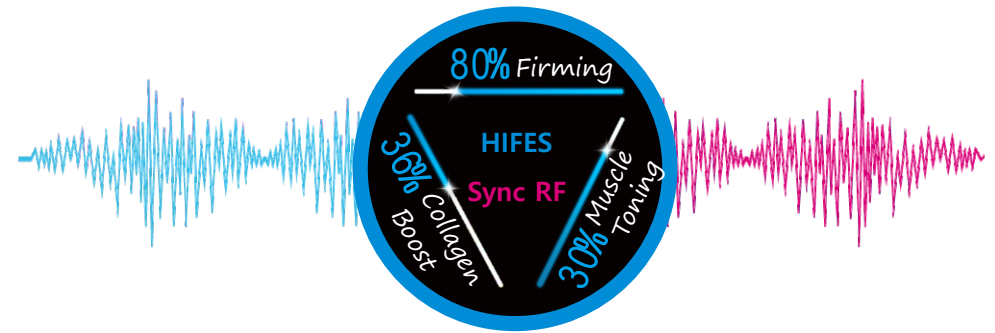

After

Wrinkles and sagging are reduced, with more youthful and refreshed look.

Dual Action Optimal Results

- **HIFES* (High Intensity Focused Electrical Stimulation):** It emits thousands of pulses per session to contract and tone delicate facial muscles.
- **Sync RF (Radiofrequency):** This technology remodels and smooths the skin by increasing collagen and elastin fibers.

HIFES* (High Intensity Focused Electrical Stimulation)

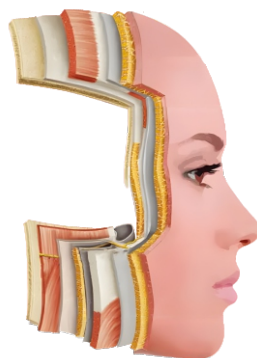

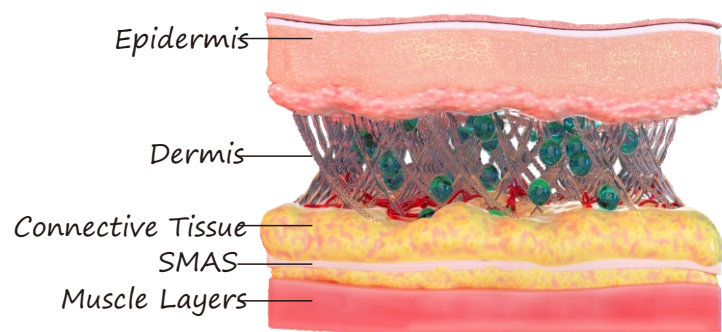

- **Targeted Muscle Activation:** HIFES specifically contracts facial muscles.
- **Electromagnetic Stimulation:** HIFES effectively stimulates muscle fibers.
- **Facial Lifting:** HIFES aims to lift and tone facial muscles.

Sync RF (Radiofrequency)

- **Skin Remodeling:** It heats the dermis, stimulating collagen production.
- **Tightening Effect:** It tightens the skin, enhancing overall skin quality.
-

ALL-IN-ONE REJUVENATION

In just 20 minutes, this needle-free wonder works its magic, addressing not only the epidermis and dermis but also diving deeper into the realms of connective tissue, fascia, and muscle layers.

Key Benefits

► 2 THERAPIES IN ONE PROCEDURE

Combination of synchronized RF and HIFES energies for simultaneous treatment of facial skin and muscles.

► FIRMING

Firms the framework of face.

► COLLAGEN BOOST

Enhances skin texture and elasticity.

MUSCLE TONING

Defines jawline and contours.
